

Local Security Principles – Solutions

Lab 1: Sudo

```
$ sudo useradd user1  
$ visudo /etc/sudoers
```

Add this line to the file:

```
user1      ALL=(ALL)      ALL
```

Lab 2: Password Aging

```
$ chage --list user1  
$ # NOTE: The example solution for chage below works in the  
$ # US. Chage -E uses the default date format for the  
$ # keyboard setting.  
$ chage -E 2014-12-31 user1  
$ chage --list user1  
$ sudo userdel user1
```
